- Login
- Logout
- Product Upload
- Product Information and purchase

Background

We use Carousell as a model;
and extract some of their features as our project.

Besides, we absorb other characteristics from other similar websites and merge them into this website.

Front-end framework

Materialize

Our Teams

Sales Team

This team focuses on generating revenue by actively selling products or services to potential customers. They often engage in prospecting, lead generation, product demonstrations, negotiations, and closing deals.
Contact: (+852) 12345678

Customer Service Team

This team is responsible for addressing customer inquiries, concerns, and providing support. They handle tasks like answering customer queries, resolving complaints, processing returns or exchanges, and ensuring overall customer satisfaction.
Contact: (+852) 12354361

Account Management Team

This team is typically assigned to existing customers and focuses on building and maintaining long-term relationships. They work closely with clients, understand their needs, provide personalized assistance, and seek opportunities for upselling or cross-selling.
Contact: (+852) 14012678

Technical Support Team

In organizations that offer technical products or services, there is usually a dedicated technical support team. They assist customers with troubleshooting, resolving technical issues, and ensuring smooth operation or usage of the product or service.
Contact: (+852) 12442568

Frequently Asked Questions

How do I create an account on Coursell?
To create an account on Coursell, visit our website and click on the "Sign Up" or "Create Account" button. Fill in the required information, such as your name, email address, and password. Once completed, your account will be created, and you can start exploring our courses.

What courses are available on Coursell?
Coursell offers a wide range of courses covering various subjects such as business, technology, arts, languages, and more. Our course catalog includes both beginner-friendly courses and advanced programs to cater to different skill levels and interests.

How can I enroll in a course on Coursell?
To enroll in a course on Coursell, search for the desired course on our website or app. Once you find the course, click on the "Enroll" or "Join" button. If there is a fee associated with the course, you'll be prompted to complete the payment process. After enrollment, you'll gain access to the course materials.

Can I access my courses on multiple devices?
Yes, you can access your courses on multiple devices. Coursell provides a seamless experience across various platforms, including desktop computers, laptops, smartphones, and tablets. Simply log in to your account using your credentials, and your enrolled courses will be available to you on any compatible device.

Is there a cost associated with using Coursell?
Coursell offers both free and paid courses. While some courses are available at no cost, others may require payment. The course price is determined by the instructor or institution offering the course. We strive to provide a diverse range of high-quality courses at affordable rates.

```

Form Validation Checking Example:

A registration form with the following fields and validation messages:

- Lastname:** Sam1. Validation message: *** last name must be letters, space only
- Firstname:** TAM
- Create Your Username:** Daniel912
- Phone:** A90054780. Validation message: *** Phone number must be number 0-9
- Email:** BBC@bbc.com
- Password:** Validation message: *** Password must be only contain a-z, A-Z, 0-9
- Repeat password:** ... Validation message: *** password does not match
- SIGN UP:** A green button at the bottom.

A close-up of an email field with the text "BBC#bbc.com". A red underline is present. A tooltip message in Chinese says: "請在電子郵件地址中包含「@」。「BBC#bbc.com」未包含「@」。" (Please include "@" in the email address. "BBC#bbc.com" does not contain "@").

Message display in red-text under each label

Security Issues:

- Avoid XSS attack

Example:

Inside php:

```
$str = 'I love "PHP".';  
echo htmlspecialchars($str, ENT_QUOTES);
```

HTML Output:

I love "PHP";.

Browser output:

I love "PHP".

- Avoid password release:

```
<div class="row">  
  <div class="input-field col s6">  
    <input id="last_name" type="text" class="validate" name="last_name" value="<?php echo htmlspecialchars($lastname) ?>">  
    <label for="last_name">Lastname</label>  
    <div class="red-text"><?php echo $errors['last_name']; ?></div>  
  </div>  
  <div class="input-field col s6">  
    <input id="first_name" type="text" class="validate" name="first_name" value="<?php echo htmlspecialchars($firstname) ?>">  
    <label for="first_name">Firstname</label>  
    <div class="red-text"><?php echo $errors['first_name']; ?></div>  
  </div>  
</div>  
  
<div class="row">  
  <div class="input-field col s12">  
    <input id="username" type="text" class="validate" name="username" value="<?php echo htmlspecialchars($username) ?>">  
    <label for="username">Create Your Username</label>  
    <div class="red-text"><?php echo $errors['username']; ?></div>  
  </div>  
</div>  
  
<div class="row">

Email and Password Checking:

```
// Proceed with DB checks if no initial errors
if (!array_filter($errors)) {
    $email = mysqli_real_escape_string($conn, $email);
    $password = mysqli_real_escape_string($conn, $password);

    $sql = "SELECT * FROM users WHERE email='{$email}'";
    $result = mysqli_query($conn, $sql);
    $user = mysqli_fetch_assoc($result);

    if ($user) {
        // Use password_verify() to compare the form password with the hashed database password
        if (password_verify($password, $user['password'])) {
            $_SESSION['user_name'] = $user['username'];
            $_SESSION['email'] = $user['email'];
            $_SESSION['id'] = $user['id'];
            header("Location: ../main.php");
            exit();
        } else {
            $errors['password'] = "***The password is incorrect.";
        }
    } else {
        $errors['email'] = "***The email has not been registered.";
    }
}
```

Get email from database → Verify hashed password

A screenshot of a web application's login page. The page has a dark background with a building image. The title "Login" is at the top right. There are two input fields: "Email" with the value "w@w.com" and "Password" with a masked value "....". A red error message "***The email has not been registered." is displayed below the email field. A green "LOGIN" button is centered below the fields. At the bottom, there is a link "Not registered yet? Sign up for free now!" and a "Home" link.

A screenshot of the same web application's login page. The "Email" field now contains "BBC@bbc.com". The "Password" field is masked with ".....". A red error message "***The password is incorrect." is displayed below the password field. The "LOGIN" button and the bottom links remain the same.

Avoid XSS Attack:

```
<div class="row">
  <div class="input-field col s12">
    <input id="email" type="email" class="validate" name="email" value="<?php echo htmlspecialchars($email) ?>">
    <label for="email">Email</label>
    <div class="red-text"><?php echo $errors['email']; ?></div>
  </div>
</div>

<div class="row">
  <div class="input-field col s12">
    <input id="password" type="password" class="validate" name="password" value="<?php echo htmlspecialchars($password) ?>">
    <label for="password">Password</label>
    <div class="red-text"><?php echo $errors['password']; ?></div>
  </div>
</div>
```

Logout.php

```
<?php  
session_start();  
session_destroy();  
header("Location: login.php");  
?>
```

Session Setting:

For signup.php. If the user signup.
The system will direct it to main page

```
session_start();
if (isset($_SESSION["user_name"])){
    header("Location: ../main.php");
}
```

```
if(mysqli_query($conn, $sql)) {
    // success
    $_SESSION["user_name"] = $username;
    mysqli_close($conn);
    // Redirect to main.php
    header('Location: ../main.php');
    exit;
} else {
    echo 'query error: ' . mysqli_error($conn);
    mysqli_close($conn);
    echo 'DB closed upon error!';
}
```

For login.php. If the user has been
login. User will keep on main page

```
session_start();
if (isset($_SESSION["user_name"])){
    header("Location: ../main.php");
}
```

For logout.php. If the user clicks
logout. The system will direct the
user to the login page.

```
session_start();
session_destroy();
header("Location: login.php");
```

For main.php. If the user does not
login. System will direct the user to
the login page

```
<?php
session_start();
if(!isset($_SESSION['user_name'])){
    header("Location: login/login.php");
}
```

Profile

Function:

- View personal information
- BACK: Direct user comes back to main page
- DELETE ACCOUNT: Allow user delete current login account
- EDIT: Allow users change personal information in database

Profile.php

```
include('database.php');  
// Assuming you have a database connection in a variable $conn  
$user_name = $_SESSION['user_name'];  
  
// Fetch user information  
$query = "SELECT first_name, last_name, username, email, phone_number, `money` FROM users WHERE username = ?";  
$stmt = $conn->prepare($query);  
$stmt->bind_param("s", $user_name);  
$stmt->execute();  
$result = $stmt->get_result();  
$user = $result->fetch_assoc();  
  
?>
```

Select data from database to display

delete.php

- Use DELETE SQL statement to delete user information from the database
- After deleting, direct the user back to the index page

```
<?php
include('database.php'); // Include your database connection script

// Check if username parameter is available in URL
if(isset($_GET['id'])){
    $username = mysqli_real_escape_string($conn, $_GET['id']);

    // Make SQL
    $sql = "DELETE FROM users WHERE username = '$username'";

    // Save to db and check
    if(mysqli_query($conn, $sql)){
        // success
        if(mysqli_affected_rows($conn) > 0){
            // rows were deleted
            header('Location: ../index.php');
        } else {
            // no rows were deleted
            echo "No rows were deleted. Check if the username is correct.";
        }
    } else {
        echo 'query error: '. mysqli_error($conn);
    }
} else {
    echo "No username parameter provided in the URL.";
}

?>
```

edit.php

- Use UPDATE SQL statement to update the user information from the database
- After edited, redirect the user to the main page

```
include('database.php');
$user_name = $_SESSION['user_name'];

// Fetch user information
$query = "SELECT first_name, last_name, username, email, phone_number FROM users WHERE username = ?";
$stmt = $conn->prepare($query);
$stmt->bind_param("s", $user_name);
$stmt->execute();
$result = $stmt->get_result();
$user = $result->fetch_assoc();

// Handle form submission
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    $first_name = $_POST['first_name'];
    $last_name = $_POST['last_name'];
    $username = $_POST['username'];
    $email = $_POST['email'];
    $phone_number = $_POST['phone_number'];

    // Update user information
    $query = "UPDATE users SET first_name = ?, last_name = ?, username = ?, email = ?, phone_number = ? WHERE username = ?";
    $stmt = $conn->prepare($query);
    $stmt->bind_param("sssss", $first_name, $last_name, $username, $email, $phone_number, $user_name);
    $stmt->execute();

    $_SESSION['user_name'] = $username;
}

header("Location: ../main.php");
exit;
```

upload.php

- Create a SELECT FILE button for the user to upload the product image to product_images folder and database
- Redirect the user to the main page after a successful upload
- Get id for insert product, rename it as 'product[id].jpg' to match the format

Insert product information into 'products' database

```
$productId = $conn->insert_id;
```

```
$targetDir = "../product_images/";

// Check if directory does not exist and create it
if (!file_exists($targetDir)) {
    mkdir($targetDir, 0777, true);
}

// Construct the filename using the product ID
$imageFileType = pathinfo($productImage["name"], PATHINFO_EXTENSION);
$targetFile = $targetDir . "product" . $productId . "." . $imageFileType;

// Move the uploaded file
if (move_uploaded_file($productImage["tmp_name"], $targetFile)) {
    // Insert into product_images table or update product record to include image file path

    $sql = "UPDATE product_images SET image_file = ? WHERE product_id = ?";
    $stmt = $conn->prepare($sql);
    $stmt->bind_param("si", $targetFile, $productId);
    $stmt->execute();

    echo "The file ". basename($productImage["name"]). " has been uploaded.";
    header("Location: ../main.php");
} else {
    echo "Sorry, there was an error uploading your file.";
    echo "Error: " . $_FILES["productImage"]["error"];
}
```

```
// First, insert product details into the database
$sql = "INSERT INTO products (seller_id, product_name, product_description, price, `condition`, mailing, meetup) VALUES (?, ?, ?, ?, ?, ?, ?)";
$stmt = $conn->prepare($sql);
$stmt->bind_param("issssss", $sellerId, $productName, $productDescription, $productPrice, $productCondition, $productMailing, $productMeetup);
$stmt->execute();
```
